Partial test report

USA FCC Part 15.209, 15.225, 15.247
CANADA RSS-Gen, RSS-210, RSS-247

USA FCC Part 15 - Radio Frequency Devices:

15.209 Radiated emission limits; general requirements.

15.225 Operation within the band 13.110-14.010 MHz.

15.247 Operation within the bands 902-928 MHz, 2400-2483.5 MHz, and 5725-5850 MHz.

CANADA - Radio Standards Specifications:

RSS-Gen General Requirements for Compliance of Radio Apparatus.

RSS-210 Licence-Exempt Radio Apparatus: Category I Equipment.

RSS-247 Digital Transmission Systems (DTSs), Frequency Hopping Systems (FHSs) and Licence-Exempt Local Area Network (LE-LAN) Devices.

(*) Identification of item tested	USB/Ethernet RFID encoder
(*) Trademark	NCoder Fingerprint
(*) Model and/or type reference	EC0BF (type reference: A1928)
Other identification of the product	Hardware version: 1.0 Software version: 0164 (Control Firmware) + 0172 (Reader Firmware) + 0136 (BGM111 Firmware) FCC ID: UKCEC0B IC: 10088A-EC0B
(*) Features	USB, Ethernet Finger print and a certified Bluetooth module (BGM111)
Applicant	SALTO Systems, S.L. Arkotz 9, Polígono Lanbarren 20180, Oiartzun, Gipuzkoa, SPAIN

Competences and guarantees

DEKRA Testing and Certification is a testing laboratory accredited by the National Accreditation Body (ENAC - Entidad Nacional de Acreditación), to perform the tests indicated in the Certificate No. 51/LE 147.

DEKRA Testing and Certification is a FCC-recognized accredited testing laboratory with appropriate scope of accreditation that include testing performed in this test report.

DEKRA Testing and Certification is an ISED-recognized accredited testing laboratory with appropriate scope of accreditation that include testing performed in this test report.

In order to assure the traceability to other national and international laboratories, DEKRA Testing and Certification has a calibration and maintenance program for its measurement equipment.

DEKRA Testing and Certification guarantees the reliability of the data presented in this report, which is the result of the measurements and the tests performed to the item under test on the date and under the conditions stated on the report and, it is based on the knowledge and technical facilities available at DEKRA Testing and Certification at the time of performance of the test.

DEKRA Testing and Certification is liable to the client for the maintenance of the confidentiality of all information related to the item under test and the results of the test.

The results presented in this Test Report apply only to the particular item under test established in this document.

IMPORTANT: No parts of this report may be reproduced or quoted out of context, in any form or by any means, except in full, without the previous written permission of DEKRA Testing and Certification.

General conditions

1. This report is only referred to the item that has undergone the test.
2. This report does not constitute or imply on its own an approval of the product by the Certification Bodies or competent Authorities.
3. This document is only valid if complete; no partial reproduction can be made without previous written permission of DEKRA Testing and Certification.
4. This test report cannot be used partially or in full for publicity and/or promotional purposes without previous written permission of DEKRA Testing and Certification and the Accreditation Bodies.

Uncertainty

Uncertainty (factor $k=2$) was calculated according to the DEKRA Testing and Certification internal document PODT000.

Data provided by the client

The following data has been provided by the client:

1. Information relating to the description of the sample ("Identification of the item tested", "Trademark", "Model and/or type reference tested").
2. The sample consists of a SALTO NCoder with Fingerprint and with USB/Ethernet RFID Mifare (ISO14443A & ISO15693 standard based) and Bluetooth Smart (BGM111 module) technology.

DEKRA Testing and Certification S.A.U. declines any responsibility with respect to the information provided by the client and that may affect the validity of results.

Usage of samples

Samples undergoing test have been selected by: The client.

- Sample S/01 is composed of the following elements:

Control Nº	Description	Model	Serial Nº	Date of reception
60237/003	USB/Ethernet RFID encoder	EC0BF	---	2019-04-17

Auxiliary elements used with sample S/01:

Control Nº	Description	Model	Serial Nº	Date of reception
60237/006	AC/DC adapter	6A-054WP05B	---	2019-04-17
60237/008	USB cable	---	---	2019-04-17

Sample S/01 has undergone the following test(s): All tests indicated in Appendix A.

Test sample description

Environmental conditions

In the control chamber, the following limits were not exceeded during the test:

Temperature	Min. = 15 °C Max. = 35 °C
Relative humidity	Min. = 20 % Max. = 75 %
Air pressure	Min. = 860 mbar Max. = 1060 mbar

In the semianechoic chamber, the following limits were not exceeded during the test.

Temperature	Min. = 15 °C Max. = 35 °C
Relative humidity	Min. = 20 % Max. = 75 %
Air pressure	Min. = 860 mbar Max. = 1060 mbar

Remarks and comments

The tests have been performed by the technical personnel: Miguel Ángel Torres.

Used instrumentation:

INDEX

TEST CONDITIONS11

FCC 15.209 (a), FCC 15.225 (d), FCC 15.247 (d) / RSS-Gen 8.9, RSS-210 B.6 (d), RSS-247 5.5. Transmitter
out of band radiated emissions with simultaneous transmissions14

TEST CONDITIONS

POWER SUPPLY (V):

V nominal: 5 Vdc.
Type of Power Supply: External power supply.

ANTENNA:

Type of NFC Antenna: Internal (PCB).
Maximum Declared Gain for NFC Antenna: Not Applicable.

Type of Bluetooth Antenna: Internal (Chip).
Maximum Declared Gain for Bluetooth Antenna: 1 dBi

The test set-up was made in accordance to the general provisions of FCC DTS Measurement 558074 D01 DTS Meas Guidance v05r02 dated April 2, 2019.

The EUT was tested in the following operating mode:

- Continuous transmission with a modulated carrier at maximum power in all required channels selecting the supported data rates/modulations types.

During transmitter test the EUT was being controlled by the SW tool to operate in a continuous transmit mode on the test channel as required and in each of the different modulation modes.

The following configurations were selected based on preliminary testing that identified those corresponding to the worst cases:

Transmission modes selected with each radio:

* NFC: Transmitter radiated spurious emissions tests were performed with the EUT transmitting in NFC ISO 14443A (106 Kbps) and NFC ISO 15693 (106 Kbps) because both modulations can transmit simultaneously with the other radio.

* Bluetooth Low Energy: Transmitter radiated spurious emissions tests were performed with the EUT transmitting in Low Energy mode.

Simultaneous transmission modes selected:

* **NFC ISO 14443A, Bluetooth Low Energy co-location**, with the EUT configured to simultaneously transmit two signals at maximum output power, NFC ISO 14443A (106 Kbps), Bluetooth Low Energy.

* **NFC ISO 15693, Bluetooth Low Energy co-location**, with the EUT configured to simultaneously transmit two signals at maximum output power, NFC ISO 15693 (106 Kbps), Bluetooth Low Energy.

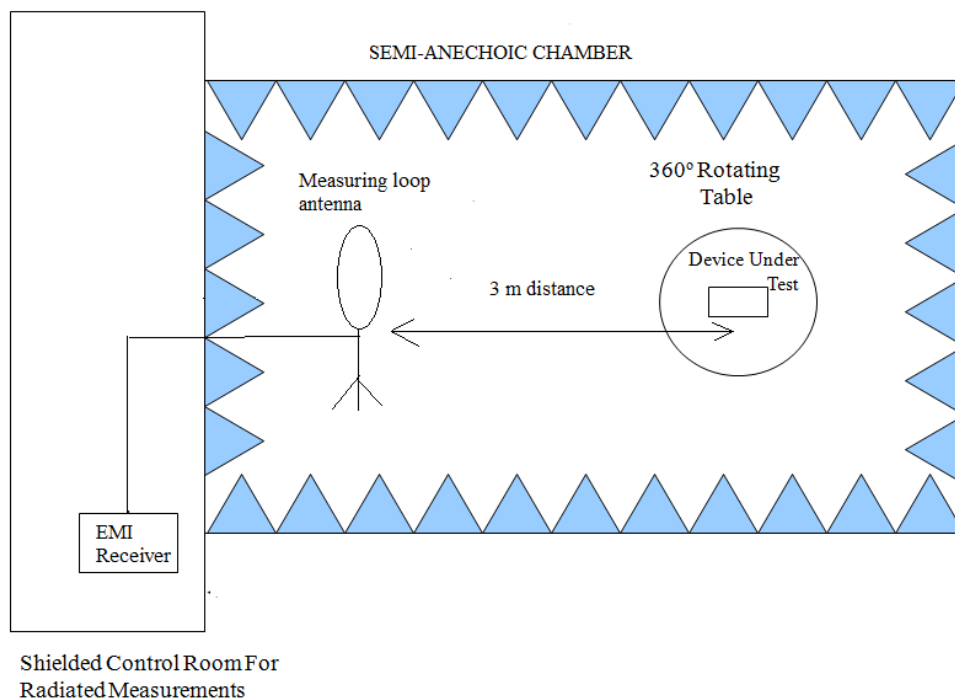

RADIATED MEASUREMENTS

All radiated tests were performed in a semi-anechoic chamber. The measurement antenna is situated at a distance of 3 m. The EUT was placed at a height of 80 cm above the reference ground plane in the center of the chamber turntable to perform the measurements below 1GHz and The EUT was placed at a height of 1.5 meters above the test chamber floor in the center of the chamber turntable to perform the measurements above 1GHz. It was also rotated 360° and the antenna height was varied from 1 to 4 meters to find the maximum radiated emission.

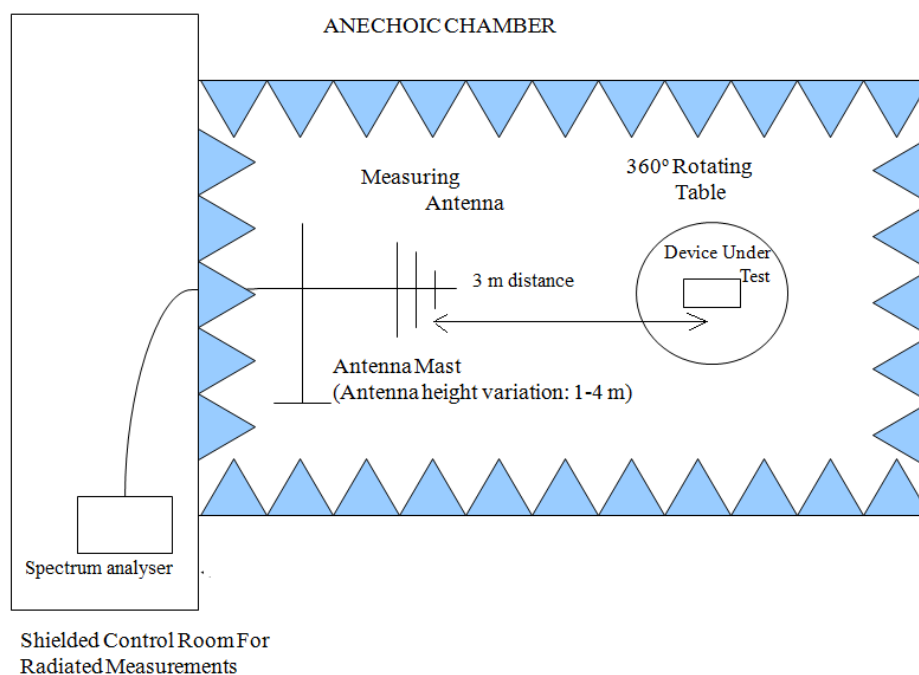

Measurements were made in both horizontal and vertical planes of polarization.

The final measured value, for the given emission, in the tables below incorporates the calibrated antenna factor, preamplifier gain (if used) and cable losses.

Radiated measurements setup $9 \text{ kHz} < f < 30 \text{ MHz}$:

Radiated measurements setup $30 \text{ MHz} < f < 1 \text{ GHz}$

Radiated measurements setup $f > 1 \text{ GHz}$

FCC 15.209 (a), FCC 15.225 (d), FCC 15.247 (d) / RSS-Gen 8.9, RSS-210 B.6 (d), RSS-247 5.5. Transmitter out of band radiated emissions with simultaneous transmissions

SPECIFICATION:

Radiated emissions which fall in the restricted bands, as defined in §15.205 (a), appearing outside of the band 13.110 MHz - 14.010 MHz must also comply with the radiated emission limits specified in §15.209 (a) (see §15.205 (c) / RSS-Gen):

Frequency Range (MHz)	Field strength ($\mu\text{V/m}$)	Field strength ($\text{dB}\mu\text{V/m}$)	Measurement distance (m)
0.009-0.490	2400/F(kHz)	-	300
0.490-1.705	24000/F(kHz)	-	30
1.705 - 30.0	30	29.54	30
30 - 88	100	40	3
88 - 216	150	43.5	3
216 - 960	200	46	3
960 - 40000	500	54	3

The emission limits shown in the above table are based on measurements employing CISPR quasi-peak detector except for the frequency bands 9-90 kHz, 110-490 kHz and above 1000 MHz. Radiated emission limits in these three bands are based on measurements employing an average detector.

For average radiated emission measurements above 1000 MHz, there is also a limit corresponding to 20 dB above the indicated values in the table is specified when measuring with peak detector function.

RSS-247. Attenuation below the general field strength limits specified in RSS-Gen is not required.

RESULTS:

The situation and orientation was varied to find the maximum radiated emission. It was also rotated 360° and the antenna height was varied from 1 to 4 meters to find the maximum radiated emission.

Measurements were made in both horizontal and vertical planes of polarization.

All tests were performed in a semi-anechoic chamber at a distance of 3 m for the frequency range 30 MHz-40 GHz.

The field strength is calculated by adding correction factor to the measured level from the spectrum analyzer. This correction factor includes antenna factor, cable loss and pre-amplifiers gain.

Test performed on the following worst cases in all relevant tests channels.

- **Mode NFC A and Bluetooth Low Energy.**

NFC ISO 14443A: 106Kbps (13.56 MHz).

Bluetooth Low Energy: 1Mbps (2440 MHz).

Frequency range 9 KHz - 30 MHz

The spurious emissions below 1 GHz do not depend on either the operating channel or the modulation mode selected in the EUT.

No spurious frequencies detected at less than 20 dB below the limit.

Frequency range 30 MHz - 1 GHz

The spurious emissions below 1 GHz do not depend on either the operating channel or the modulation mode selected in the EUT.

Spurious frequencies at less than 20 dB below the limit:

Spurious frequency (MHz)	Polarization	Detector	Emission Level (dBμV/m)	Limit (dBμV/m)	Measurement Uncertainty (dB)
49.675	V	Quasi-Peak	36.7	40	± 3.88
104.965	V	Quasi-Peak	26.7	43.5	± 3.88
288.651	H	Quasi-Peak	39.8	46	± 3.88
375.013	V	Quasi-Peak	37.8	46	± 3.88
393.249	V	Quasi-Peak	33.9	46	± 3.88
400.007	H	Quasi-Peak	27.7	46	± 3.88

Frequency range 1 - 26 GHz

No spurious frequencies detected at less than 20 dB below the limit for all the channels.

Verdict: PASS

FREQUENCY RANGE 9 kHz - 30 MHz

FREQUENCY RANGE 30 MHz - 1 GHz

FREQUENCY RANGE 1 - 3 GHz

Note: The peaks shown in the plot above the limit are the carrier frequencies.

FREQUENCY RANGE 3 - 17 GHz

FREQUENCY RANGE 17 - 26 GHz

- **Mode NFC V and Bluetooth Low Energy.**

NFC ISO 15693: 106Kbps (13.56 MHz).
Bluetooth Low Energy: 1Mbps (2440 MHz).

Frequency range 9 KHz - 30 MHz

The spurious emissions below 1 GHz do not depend on either the operating channel or the modulation mode selected in the EUT.

No spurious frequencies detected at less than 20 dB below the limit.

Frequency range 30 MHz - 1 GHz

The spurious emissions below 1 GHz do not depend on either the operating channel or the modulation mode selected in the EUT.

Spurious frequencies at less than 20 dB below the limit:

Spurious frequency (MHz)	Polarization	Detector	Emission Level (dBμV/m)	Limit (dBμV/m)	Measurement Uncertainty (dB)
50.580	V	Quasi-Peak	22.4	40	± 3.88
105.482	V	Quasi-Peak	28.2	43.5	± 3.88
275.006	H	Quasi-Peak	29.2	46	± 3.88
288.651	H	Quasi-Peak	41.7	46	± 3.88
350.019	H	Quasi-Peak	26.2	46	± 3.88
366.121	V	Quasi-Peak	35.3	46	± 3.88
375.013	V	Quasi-Peak	37.2	46	± 3.88
400.007	V	Quasi-Peak	33.8	46	± 3.88

Frequency range 1 - 26 GHz

No spurious frequencies detected at less than 20 dB below the limit.

Verdict: PASS

FREQUENCY RANGE 9 kHz - 30 MHz

FREQUENCY RANGE 30 MHz - 1 GHz

FREQUENCY RANGE 1 - 3 GHz

Note: The peaks shown in the plot above the limit are the carrier frequencies.

FREQUENCY RANGE 3 - 17 GHz

FREQUENCY RANGE 17 - 26 GHz
